

Mobile phlebotomy

We offer mobile blood draw services if you are unable to have your blood drawn at your doctor's office. We can ship a blood collection kit to your home and you can easily make an appointment to have a licensed phlebotomist come to your home or specified location at your convenience. The phlebotomist will ship your blood sample to our labs for testing and your doctor will be notified when results are available. Our Patient Service Specialists are available to help assist with coordination.

How much does the test cost?

To ensure access to testing for all patients, we are actively engaged with Medicare and commercial payers to facilitate reimbursement. Additionally, we offer supplemental financial assistance to further alleviate any financial strain.

For more information, our Patient Service Specialists are available on-demand, and if your out-of-pocket expenses exceed \$250, a member of our team will proactively reach out to provide support.

Contact our specialists by email at patients@haystackmrd.com.

Backed by Quest

Haystack MRD is part of Quest Diagnostics, a trusted ally for providing accessible and high-quality testing at critical moments.

Quest Diagnostics touches the lives of
74M Americans each year

Half of all
physicians and hospitals
in the US work with us

73,000 ✈️
stops by our courier
vehicles each day

23,000+ phlebotomists
and nurses,
600 doctors and PhD
scientists all working
together with your doctor

2,000 Patient Service
Centers provide
nationwide patient access

Our network of labs operates
24 hours a day, **365**
days a year

Quest Diagnostics unmatched
health service solutions
provide insights that
transform lives

HAYSTACK MRD™

Your key to informed treatment decisions

Unlock critical information about your cancer status to help you receive the right treatment at the right time.

What is Haystack MRD?

Haystack MRD is a blood test that can identify minimal residual disease (MRD). MRD refers to tiny amounts of cancer cells that might be left in the body after you've had treatment. These cancer cells release DNA into the bloodstream and this DNA, known as circulating tumor DNA (ctDNA), is detected by Haystack MRD. Haystack MRD is custom-designed based on the distinct mutations found in each patient's tumor, allowing for accurate ctDNA detection.¹

Why is MRD testing important?

Any cancer cells that remain after surgery might cause the cancer to come back. MRD testing can help identify whether these cells are present, so that you and your doctor can make better-informed decisions about whether additional treatments may be right for you.

MRD testing can also be used to help you and your doctor to monitor disease progress over time and to determine whether treatments are working to remove any remaining cancer cells.

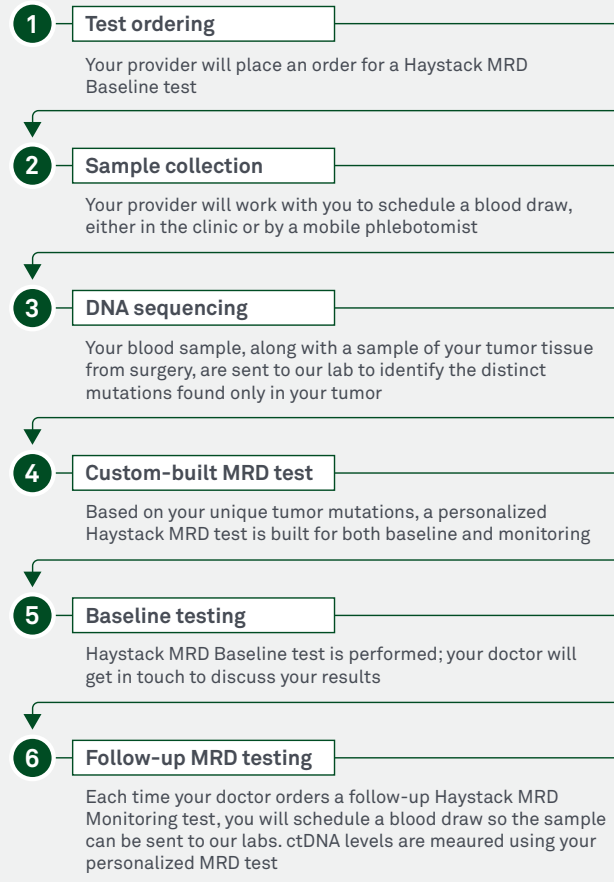

If you have no evidence of disease (NED) immediately after surgery or other treatments, you and your doctor can continue to use MRD testing to monitor for cancer recurrence. Compared to traditional imaging methods, MRD testing can help detect recurrence early, when additional treatments are more likely to provide the greatest impact.

MRD testing can help answer:

- Are any cancer cells remaining after surgery?
- Is my treatment successful?
- Is the cancer coming back?

How does the test work?

When should I expect my test results?

~30 Days

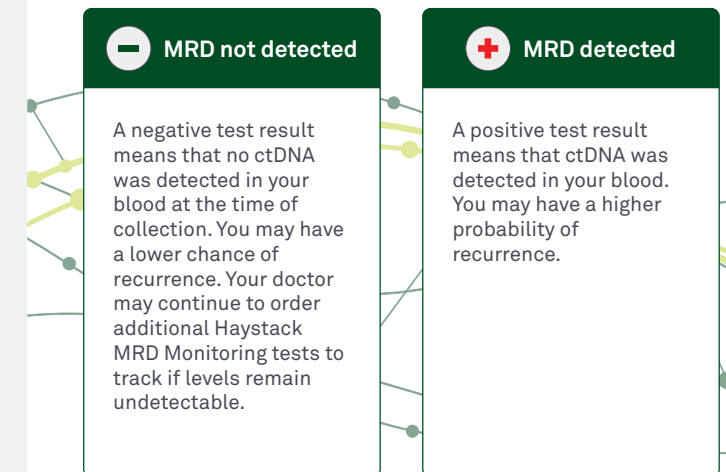

Haystack MRD Baseline: Results for your first test will take about 30 days to allow time to build your personalized test

7-10 Days

Haystack MRD Monitoring: After your test has been built, all follow-up MRD monitoring test results will be available to your doctor within 7-10 days

What do the test results mean?

Haystack MRD will report whether ctDNA was detected in your blood. You and your doctor can use this information to help guide treatment decisions.

Genetic counselors are available to provide support with any additional questions regarding your test results.
